About This Game

"To find yourself in a new, unknown world - it's like standing face-to-face with a monster. And so many forget: in that world, they are just as much of a monster." - the Curator.

During the New Year's Eve, the curator of a mansion built on the outskirts of a town invites his protege and her friends to celebrate the New Year together. He gives her an unusual gift. The gift that is never meant to be opened. And only a powerful mage such as her can keep it shut. It and what it holds within. At least, that's what the Curator thought...

D'LIRIUM is an experimental 2D-shooter with the elements of a horror game. The game brings together some mechanics back from 90s classics, such as a search for the keys, non-linear levels and a lot of other things. Moreover, the game contains a lot of experimental tricks, such as random events, non-traditional controls for a shooter game, etc.

After playing this, here's what I thought: Audiosurf is truly a masterpiece.. Game defiantly reminds me of Capitalism 2 and Industry giant II but with a modern twist. There are some minor tweaks that need to happen to game to make it a bit better or easier to find the information. Other then that is a great game and worth the 20 bucks! I hope there is additional content or dlc at some point to add more to the game! It would be fun to manage the transportation of the goods you make.. Great little action game. You're a tank, blow stuff up, get cool weapons!. This DLC is a stunning example of years of work, and it shines through from the moment you start driving! The rolling stock is all done to a very high standard, in particular the locomotives are extremely detailed. Whether you are interested in the history of this railway, want to make some scenarios for Train Simulator or just want to drive trains and enjoy the scenery this will fit all criteria.

The Class 105 DLC offered alongside this is also good, I did not buy it as it came with an earlier purchase of a BR Blue loco pack, however as a standalone it is equally worth it and comes with fitting scenarios for this particular route.

All in all, this is my favourite route for Train Simulator; if you'd like a taste of British scenery then this is the route for you! As with all TS DLCs it's worth waiting for a sale if you're wallet's a little light as prices are reduced a lot!. Why'd you steal the car.. I wanted to recommend it - it's a nice little puzzly strategy game, lacking only in polish: it's incredibly slow. For example, even if there's no damage done in an attack, you still have to watch the little "I'm attacking" animation and listen to the "pew pew" sound. But when it crashes during the middle of an AI turn and loses data from a scenario not ironically named a "Grind", I sadly have to give it the big frowny face.. I was starting to get bored with VR, as I couldn't find any proper games with Depth.

My favourites were kittypocalypse, and robots revenge, but they didn't have much long playability, and I'd kinda done them.

This has many, many hours of gameplay and learning and challenges, and I'm really quite excited about the struggle to become self sufficient.

And then I can relax. :-)

There is no touch controller support for the oculus rift. What a shame. Playing with the controller just feels awful. :|. On a scale of 1-10 I give a "meh"... Its no Grimrock II, but its better than Coldfire Keep and other clones.

If you like dungeon crawlers... you ll have fun :). where is everyone at im in a game come jion match making. funny simple fast paced defense game where you need to shoot at enemies -

however, its just impossible to kill them all, even though you have different upgrades as you kill the enemies - faster shooting, faster bullets, more damage, etc.

what i especially liked in a game - it required only 8mb for download! extremely lightweight. Too buggy to play.. Fairly short, but the fun isn't in "beating" the game, it's in discovering all of the ridiculous recipes and then making absolutely ludicrous machines. I've played similar factory games, and most of them have a bit more content and a bit more explicit challenge, but also feel comparatively "sterile" (not to mention cost 2-3 times as much). The assembly lines in this have so many more possibilities, since it actually uses some rudimentary physics, and *really weird stuff* is possible.

I don't really feel like the point of this game is just to beat it... The goals are there just as a sort of tutorial to drive you forward in discovering the different tools available. I beat the game in like an hour, but I still ended up playing it for a long time after I beat it. I am all about efficiency, and making the most efficient production lines possible (using some really funky tricks) is the part I really enjoyed. I planned to just take a quick peek and make sure the game ran on on OSX, and ended up beating it several times over in a single sitting in my quest for production line perfection.

Disclosure: I received a free review copy of the game to aid with testing OSX compatibility.

. **Happy New Year 2019:**

Dear friends!

An important year is coming to a close today. 2018 was so turbulent, so fast-paced and so fruitful, we can't even imagine of repeating it. So much has been done! From a two hour long beta, ATOM has grown into a large, enticing world, where one can lose oneself for dozens of hours.

Yet, this is not even the end! **2019** will be as important for ATOM, as 2018 was. It will bring you new interesting locations, new characters, new quests, new weapons and new balance tweaks. Your ideas and suggestions will not go to waste. How could they? Without you, the waning year would never have been as successful for our team.

Thank you for sticking with us for all this time, and helping to make ATOM better every day.

Happy New Year! Good health, love, and awesome games to you all!

Let there always be ATOM!
